## Isotope Notation

NAME: Key CC

Block: \_\_\_\_\_

1. Uranium-235 and uranium-238 are considered isotopes of one another. How are uranium-235 similar, and how are they different?

U-235 and U-238 have the same #'s of protons (92)

U-235 has  $235 - 92 = 143$  neutrons | U-238 has  $238 - 92 = 146$  neutrons

2. Define isotope:

atoms with the same number of ~~the same~~ protons but different numbers of neutrons

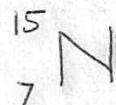

3. The number of protons in an atom is known as the atomic number of that atom.

4. The number of protons determines the name of the atom.

5. The mass number of an atom is the number of protons plus the number of neutrons in the nucleus of the atom.

6. The isotope notation for nitrogen-15 is as follows:

a. The number 15 is the mass number.

b. The number 7 is the atomic number.

c. How many neutrons does nitrogen-15 have?  $15 - 7 = 8$

7. Write the following in isotope notation:

a. zinc-66:  $\begin{array}{c} 66 \\ 30 \end{array} \text{Zn}$

d. helium-4:  $\begin{array}{c} 4 \\ 2 \end{array} \text{He}$

g. silver-108:  $\begin{array}{c} 108 \\ 47 \end{array} \text{Ag}$

b. chlorine-35:  $\begin{array}{c} 35 \\ 17 \end{array} \text{Cl}$

e. uranium-235:  $\begin{array}{c} 235 \\ 92 \end{array} \text{U}$

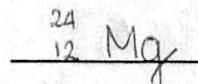

h. thorium-234:  $\begin{array}{c} 234 \\ 90 \end{array} \text{Th}$

c. plutonium-239:  $\begin{array}{c} 239 \\ 94 \end{array} \text{Pu}$

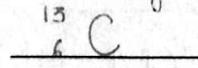

f. potassium-40:  $\begin{array}{c} 40 \\ 19 \end{array} \text{K}$

i. oxygen-16:  $\begin{array}{c} 16 \\ 8 \end{array} \text{O}$

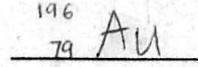

j. the atom with 12 protons and 12 neutrons

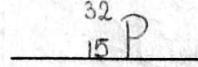

k. the atom with 6 protons and 7 neutrons

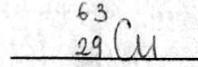

l. the atom with 79 protons and 117 neutrons.

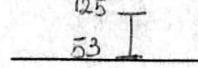

m. the phosphorus atom that has 17 neutrons.

n. the copper atom that has 34 neutrons.

o. the iodine atom that has 72 neutrons
